Nifty Volatility Forecaster: Data Checklist

What to download and place in **data/raw/**, then run **python run_all.py**

Files 1 to 4 are required for a real run. Without file 5 the run still works, but the turnover feature is set to 0. The Economic Times set from the roadmap is not needed. Dates include the later check (Window B), which tests the frozen no-sentiment model after June 2023.

#	Data	Where to get it	File name must contain	Dates needed
1	Nifty 50 1-minute prices	Kaggle: Nifty 50 Index Minute data	**minute**, ending .csv	2015 to 15 May 2026
2	India VIX daily	NSE India VIX history	**vix**, ending .csv	Jan 2015 to 15 May 2026
3	News headlines	Kaggle: India News Headlines	**headlines**, ending .csv	Whole file; the code filters it
4	Financial PhraseBank	Hugging Face: FinancialPhraseBank-v1.0.zip	Keep **Sentences_66Agree.txt**	n/a
5	Nifty 50 daily turnover (optional)	Nifty Indices historical data or NSE reports	**turnover**, ending .csv	Jan 2015 to 15 May 2026

When you download

- **Minute data:** copy only the Nifty 50 file, as this Kaggle dataset may include other indices. The loader stops if more than one file matches. The dataset now runs to 2026 according to its title, and the extra dates are ignored.
- **VIX and turnover:** NSE may limit how much you can download at once, so several yearly files are fine as long as each name matches. Turnover downloads will probably need renaming, for example nifty50_turnover_2015.csv.
- **PhraseBank:** copy just the one .txt file out of the zip. Don't use the Hugging Face preview or the datasets library, because the loader reads the raw sentence@label text. It should have 4,217 sentences.
- **Headlines:** the file has about 3.9 million rows, so it will take a while to load.

Status of data/raw/ on 3 November 2026

- **In place and working:** Nifty 50 minute data (9 Jan 2015 to 15 May 2026), news headlines (to 30 Jun 2023) and PhraseBank.
- **Still needed:** India VIX from 1 Jul 2023 to 15 May 2026. The current files stop at 30 Jun 2023, and the later check can't run without it. Add the extra files beside the existing ones.
- **Not placed (optional):** turnover. Until it is added, the feature is 0 on every row.

Expiry dates: decided, nothing to download

config/expiry_dates.csv is generated from the minute data: every Thursday to 28 Aug 2025 and every Tuesday from 2 Sep 2025, moved to the previous session on holidays. Nifty weekly options only began in 2019, as far as known, so Thursdays before that are a project choice.
